

2022 GHG Emissions Inventory

In line with our commitment to environmental responsibility and sustainability, Paack internally calculated its 2022 GHG emissions.

The calculations were conducted in accordance with GHG Protocol, GLEC Framework and ISO 14064-1 Standard, guaranteeing a holistic and accurate evaluation.

This document presents the comprehensive emissions inventory.

The calculations have been independently verified by Ernst&Young.

2022 t CO ₂ eq	
Total Direct GHG emissions (Scope 1)	264.16
Total Indirect GHG emissions (Scope 2)	
Location-based energy emissions	527.96
Market-based energy emissions	372.94
Other indirect emissions (Scope 3)	
Upstream transportation	13,526.44
Purchased products and services Materials	994.01
Purchased products and services Google Server	189.73
Purchased products and services Water	0.72
Waste generated in operations	1,183.22
Business travel	247.70
Employee commuting	140.73
